*Beyond barriers.*

confocal

STED

Immunolabelling of  $\beta$ IV-spectrin.  
Cryo-section of mouse neocortex.  
Imaged with a STEDYCON.  
Sample: Dr. Maren Engelhardt,  
Heidelberg University.

**Test the STEDYCON -  
at the conference!**

Abberior Instruments offers high-end **STED**, **RESOLFT** and **confocal microscopes**. We are a spin-off from nobel laureate Stefan Hell's lab in Göttingen, and we are proud to be able to provide you with unrivaled super-resolution expertise.

We have two types of systems in our portfolio: Expert Line and Compact Line. **The Expert Line** is modular and highly customizable. Design your own super-resolution STED or RESOLFT microscope with our assistance. It comes with superior STED resolution in 2D and 3D and an incredibly smart software.

**The Compact Line** is super easy to use, and fits on every microscope body - **upgrade your cell culture microscope to a confocal and STED microscope!** The **EPYCON** converts it to a confocal, the **STEDYCON** in addition to a STED microscope. Come and test it at the conference!
